Gibbs 2017 Sponsors

We thank our generous sponsors for their contributions to the 31st Gibbs Conference.

Beckman Coulter
Cambridge Isotope Laboratories
Edinburgh Instruments
Genentech
ISS, Inc.
Jasco
Malvern
Nanotemper Technologies
We thank the following sponsors for their generous contributions to this year’s conference:

- New England Biolabs
- Wyatt Technology
- Penn State University Department of Chemistry
- Towson University Fisher College of Science and Mathematics
- Texas State University Department of Chemistry
- UMMC Department of Biochemistry
- Unchained Labs
- Quantify stability with $\Delta G$
- Aggregation pathway & propensity with $\Delta G_{\text{trend}}$
When proteins matter.

Quickly and accurately analyze binding affinity, protein stability and sample quality with just a tiny amount of sample.

nanotempertech.com

The leading biophysical characterization source.

Malvern PANalytical

We don’t believe in TMI.

Our newest fluorescence software is designed for TMA — powerful **thermal melt anisotropy** data sets — providing deeper analysis and understanding of complex systems. In research, there is no such thing as too much information!

- Get high-quality data fast, with exceptional sensitivity.
- Tailor ramping and data collection for efficiency and accuracy.
- Automatically collect and save full-wavelength scan data for $I_{	ext{vvh}}$ $I_{	ext{hvh}}$ $F_{g,	ext{EPr}}$ anisotropy and polarization at each T.
- Control fluorescence, CD and UV-Vis/NIR thermal melt systems from one software platform, Spectra Manager™.

Check out the Capital University/JASCO poster to see results – and stop by our booth to view the program in action!
