Bilirubin Hematofluorometer
ACCELERATE THE DEVELOPMENT OF DIAGNOSTIC MARKERS AND THERAPEUTIC TARGETS

Native-condition protein characterization

By analyzing proteins as interacting elements instead of in isolation, the Analytical Ultracentrifuge more closely approximates true physiological conditions by considering the protein's conformation (folded or unfolded), assembly reversibility (interacting systems), stoichiometry (associative state), and heterogeneity (aggregation). The ProteomeLab XL-A/XL-I accelerates the development of diagnostic markers and therapeutic targets, and delivers a unique system for protein characterization in solution.

THE ULTIMATE IN
FLUORESCENCE SPECTROSCOPY

• Steady State Fluorescence
  Single Photon Counting
• Fluorescence Lifetime
  TCSPC
• Phosphorescence Lifetime
• Transient Absorption
  and much more...

Pride in Precision
Looking to improve on your synthetic biology?

gBlocks® Gene Fragments combine sequence fidelity, affordability and speed to help you meet all of your research needs.

Discover the many uses of gBlocks® Gene Fragments, including:

- Gene construction and modification
- CRISPR-mediated genome editing
- Antibody research
- qPCR standards

gBlocks® Gene Fragments are double-stranded DNA molecules that are sequence-verified prior to shipping. Libraries and plates are also available.

Learn more at www.idtdna.com/gBlocks.
Why settle for 1 PMT when you can have the power of 1000?

**Fluorolog Ultrafast CCD-based fluorometer**
the fastest, highest S/N steady state fluorometer in the world!

Fluorolog Ultrafast has the equivalent scan speed of 1,000,000 nm/second and the high quantum efficiency of a CCD out to 1 μm!

And it’s designed and built by HORIBA Scientific, so it’s a fully integrated system, controlled by our FluorEssence® software.

Contact us to step up to the power of 1000 and get the benefits of instant spectra.

**Thermal melt systems that stand up to the heat.**

Our customers have demanding applications requirements. That’s why they rely on the FP-8000 series of spectrofluorometers.

- Get high-quality data fast, with exceptional sensitivity.
- Tailor ramping and data collection for efficiency and accuracy.
- Run multiple melt experiments simultaneously from the same PC.
- Control UV, fluorescence and CD thermal melt systems from one software platform, Spectra Manager™ II.

Performance and Quality

MICROCAL PEAQ-ITC

- Guided workflows, experimental design software and fully integrated wash module for consistently high quality data
- Robust and rapid data analysis
- Improved signal to noise
- Automated system available

*No other company offers more, visit www.malvern.com.*
The Stability Expert
Prometheus NT.48

Enjoy the benefits of nanoDSF:

- See more unfolding transitions with high-resolution data
- Get faster results with lower sample quantities
- Measure within a broad concentration range, from 5 μg/ml to 150 mg/ml
- Avoid labeling, ensuring buffer & detergent independent measurements

NanoTemper Technologies offers nanoDSF technology with the Prometheus NT.48 instrument. nanoDSF is the method of choice for easy, rapid and accurate analysis of protein folding and stability, with applications in protein engineering, membrane protein research, formulation development and quality control.

NEW!
Affinity ITC

What others have attempted, TA has perfected

The Affinity ITC is a fully automated, highly sensitive, titration calorimeter for characterizing a wide variety of molecular interactions.

Features:
- **NEW** 96-well temperature-controlled liquid handling with Intelligent Hardware Positioning for walk-away automation and precise, reliable injections.
- **NEW** Flex Spin™ for the widest range of stirring speeds. Slow speed mixing (up to 10X lower than competitive units) for high sensitivity and to protect delicate structures.
- **NEW** AccuShot™ introduces samples at the right location for efficient mixing.
- **NEW** fully automated and user-selectable system cleaning routines eliminates run-to-run contamination.
- **NEW** Nano-Analyze software with batch processing for automated data analysis.
- The only automated ITC system with 190μl or 1ml sample cells.
